

Inflatable. Aquatic

It is a different inflatable with an area where children can jump inside it, with a small climbing wall with steps and handles that facilitate the climb of the small ones; once up, we're on the slide. Through it we can slide while the water flows from the tower. The slide leads to a small pool where the children can take a good dip, is also composed by a water cannon.

It is a safe, refreshing and very colorful model. Perfect for outdoor installation and easy and quick assembly.

It is surrounded by safety nets. The slide, which is the highest point has lateral protection. In addition, the perimeter of the pool is inflatable, so that the children are protected at any point of this wonderful inflatable. Includes anchoring pins that allow attachment to the ground once assembled for added stability.

The area of greatest use and, therefore, where it suffers the most wear is made with a sheet of strong PVC in sandwich format, which confers greater resistance to the inflatable. The rest of the frame is made of quality materials: nylon and vinyl, sewn with double stitching.

Both the inflatable and the materials used in its manufacture have the approvals required by the European Union and the TÜV.GS quality certificates, issued in Germany.

Supports the weight of up to four children 35 kg maximum per child. All you need is a garden hose and the local electricity to switch it on.

It can be used without water.

Dimensions

Length: 4 m

Width: 3.3 m

Height: 2.2 m

Maximum load 200 kg.
